

CONTENTS

Acknowledgements..... xi

Authors..... xii

Chapter 1..... 1

Introduction

- 1.1 Analysis and musical style
- 1.2 A History of music analysis
- 1.3 Musical style: analysis and computation
- 1.4 The origins of musical notation
- 1.5 Musical data: score and sound
- 1.6 The background to computational analysis and automatic music generation
- 1.7 Musical features
- 1.8 AI composition
- 1.9 Perception, hearing and memory
- 1.10 Book structure

Chapter 2..... 30

Musical Style

- 2.1 Aspects of Musical Style
 - 2.1.1 Introduction
 - 2.1.2 Theory and style
 - 2.1.3 Uniformity and variety
 - 2.1.4 Chronology, influences and mood
 - 2.1.5 Patronage and external influences
 - 2.1.6 Purpose and use
 - 2.1.7 Imitation, homage and satire
 - 2.1.8 Musical families
 - 2.1.9 Teaching material
 - 2.1.10 Libretto and text
- 2.2 The making of a composer
 - 2.2.1 Introduction

2.2.2 Musical identity	
2.2.3 Personality and circumstance	
2.2.4 Social environment	
2.2.5 Environment and geography	
2.2.6 Education, training and stylistic innovation	
2.2.7 Style and history	
2.2.8 Purposes and funding	
2.2.9 Musical resources	
2.2.10 Animal ‘composers’	
2.3 Musical notation	
2.3.1 Notation history	
2.3.2 Formats and writing	
2.3.3 Technology	
2.3.4 Notational transformations	
2.3.5 The dynamic reading of notation	
2.4 Aspects of musical style	
2.4.1 Components of style	
2.4.2 Evolution and change	
2.5 Case study ideas	
2.5.1 Introduction	
2.5.2 Composers and attributions	
2.5.3 Chronology and historical styles	
2.5.4 Analytical methods in relation to musical style	
2.5.5 Formal structures	
2.5.6 Notational formats, temperament and instruments	
2.5.7 Modulation	
2.5.8 Changing key usage	
2.5.9 Minimalism	
2.5.10 ‘Denaturing’ music	
2.5.11 Assessing musical quality	
2.5.12 Studying animal ‘music’	
Chapter 3.....	91
Mathematical Methods	
3.1 Introduction	
3.2 Models and modelling	
3.3 Systemic perspectives on the evolution of musical style	
3.4 Musical notation as data	
3.5 Musical components	
3.6 Mathematical frameworks for musical analysis	

- 3.7 Perception and retrospective analysis
- 3.8 Clustering data
 - 3.8.1 Statistical and hierarchical clustering techniques
 - 3.8.2 Hierarchical Clustering
 - 3.8.3 Principal Component Analysis and Support Vector Machine
- 3.9 Symbolic modelling
 - 3.9.1 Learning symbolic models of music
 - 3.9.2 Rule learning versus Decision trees
 - 3.9.3 Concept learning
 - 3.9.4 Learning rules as a search problem

Chapter 4..... 115

Computational Tools

- 4.1 Introduction
- 4.2 MIDI as data
- 4.3 Instructions for practical use
 - 4.3.1 Basic MIDI Toolbox functions
- 4.4 Example code
- 4.5 Hierarchical clustering
- 4.6 Principal Component analysis and Support Vector Machine
- 4.7 Code modifications
- 4.8 Sample sizes and statistical significance

Chapter 5..... 132

Case Studies

- 5.1 Introduction
- 5.2 A computational overview of Western classical music chronology
- 5.3 Tudor church music attributions
- 5.4 Assessing reconstructions of Renaissance polyphony
- 5.5 A chaconne by Chambonnières or Couperin?
- 5.6 Chronology, style and attribution in early keyboard suites by Bach
- 5.7 Bach's *Art of Fugue* completions compared using Information Theory
- 5.8 Quantifying musical complexity and linear automorphism
- 5.9 Network-theoretic analysis of stylistic development in Haydn's string quartets
- 5.10 Persistent homology for the chronological ordering of musical works: Haydn's string quartets
- 5.11 Music and Networks: the classical piano sonata
- 5.12 Mozart symphony attributions using unsupervised machine learning

- 5.13 A bipartite analysis of stylistic trends in Puebla Cathedral chapel
- 5.14 Florestan and Eusebius: can Schumann’s personality changes be identified in his music?
- 5.15 Interval distributions in the music of Anton Webern
- 5.16 Analysing improvised jazz
- 5.17 An analytical method for examining attributions of music by The Beatles
- 5.18 Characterizing music complexity and the relation between complexity and auditory encoding
- 5.19 Mathematical models of microtonal musical styles
- 5.20 The colour of music: stylistic timbric signatures
- 5.21 Analysis and visualization of musical structure using Networks
- 5.22 Rhythm and form in music: a complex systems approach
- 5.23 A readability formula for music written with common Western music notation
- 5.24 Complexity-based AI sound synthesis and musical score interpolator
- 5.25 The Arrow of Time: rhythmic and melodic directionality and irreversibility

Chapter 6..... 248
Conclusions and Future Thoughts

- 6.1 Introduction
- 6.2 Reductionist processes and big data
- 6.3 Methodological questions
- 6.4 Layers of complexity
- 6.5 The musical object and its performance
- 6.6 Analysis in the future

Appendix 254

Bibliography..... 256
